

GRANTSIDE ENVIRONMENTAL POLICY

6TH OCTOBER 2016

Grantside is committed to actively developing and implementing operational practices that reduce the environmental impact of its business activities. What we do today helps shape the future and we address our environmental responsibilities using the following guiding principles:

- Meeting, or exceeding where practical, all environmental legislation that relates to our business.
- Identifying, mitigating and managing environmental impacts and risks within our business.
- Selecting products for use to minimise environmental impact.
- Promoting the incorporation of low energy use services within our developments.
- Using water efficiently.
- Reducing waste and sorting at source to facilitate recycling where possible.
- Promoting incorporation of enhanced welfare facilities within commercial properties to cater for occupants who wish to travel by foot or bicycle.
- Application of the principles of sustainable development within solutions we provide for our clients.
- Being considerate to our neighbours and avoiding harm to anyone affected directly or indirectly by our activities.
- Selecting suppliers that have behaviour and policies that are no less demanding than our own in respect of environmental issues.

All our staff are briefed regarding this policy and encouraged to feedback their comments on how it can be improved.
